The missing piece of the puzzel

— What has your Trading results shown you over the course of your career as a Trader? Are you atruggling? have you seen your account experience devastating drawdown or worse... blow it out? I purposely placed this topic at the beginning ogf the core material as I believe it is the most vital component to long term success in trading Forex... or any other asset class!

I am confident the piece of the puzzel you are looking for is Risk Management. Have you risked more than 1% of your total equity on any one trade? How about just about every one of them? Have you tried on any over-leverage your account to make the losses back right away... only to find it resulted in steeper losses and deeper in depression?

At the top of the list of crucial components to seccessful and cosistent trading is the concept of Risk Management. Riks Management is basically divided into two core principles... Money Management an Trade Management . These areas are far greater in importance than your treasured little Trading System or patterns.

What Does Risk Management Really Mean?

It's The amount of Risk the Trader is wailling to assume. It should be limited to 1% of total equity or less. To calculate the Risk per trade use the following formula...

Account balance: 10000\$Percentage Risk: 1%

The Formula

$$(10000\$*1\%) = \frac{10000}{0.01} = 100\$$$

So we have defined our risk per trade as 1% — 100\$ of total equity 10000\$ Then the next section will cover Risk Reward Ratio
