1 Model Clarification

The following model system is designed to be applied and analyzed in the specific order of :

$$HTF = Stage \ (Bias)$$

$$MTF = Setup \ (PDA)$$

$$LTF = Pattern \ (Entry \ Model)$$

1.1 Model Objective

Intraday focus: capturing the obvious SSL/BSL.

STAGE	**SETUP**	**PATTERN**
Daily Range Expansion	FVG - OB - HIGHs/LOWs	The Entry Model

2 Higher Timeframe

The stage for the model is based on indentifying the higherst probability direction and draw for the expansion of the daily candle
2.1 Identify:

- Daily & Weekly Order flow

- Weekly Profiles [day of week]

- Daily Profiles [PO3 & session character]

→ When Bullish, you are anticipating Open to Low,
then expansion toward higher prices

→ When Bearish, you are anticipating Open to High,
then expansion towards lower prices

2.2 The Context for Expansions
